

## Landfill Construction Project Has Potential for Off-Site Odor

November 9, 2018

**FRESNO, Texas (Nov. 9, 2018)** – As part of the ongoing landfill gas-to-energy plant construction project at Blue Ridge Landfill, the power will be shut off to the Landfill for a few hours mid-morning on Monday, November 12. In preparation for this event, the Landfill team has pre-positioned generators to maintain power to the on-site flares and continue normal landfill gas system operations.

Although we have taken necessary precautions, there is potential for off-site odor during this event. If you do experience odor you believe is attributable to the Landfill, the Blue Ridge Landfill team has a hotline residents can contact (**281-668-9747**), and an online odor reporting option on our website at [blueridgelandfill.com/contact-us/odor-report/](http://blueridgelandfill.com/contact-us/odor-report/), where neighbors can report odors they detect so that we can investigate in a timely manner.

Thank you in advance for your patience. If you have questions or would like to learn more, visit us at [blueridgelandfill.com](http://blueridgelandfill.com).
