

Power Outage Affecting Landfill Systems

November 1, 2018

FRESNO, Texas (Nov. 1, 2018) – During last night's severe storms, Blue Ridge Landfill experienced a power outage. Per normal operating procedures, our back-up generator immediately began providing power to our landfill systems, but an additional power surge impacted the generator. While we were able to restore power to our generator, our landfill gas system is currently operating at 75 percent capacity. Because our systems are not fully operational at this time, there is potential for off-site landfill odor. Like others in the area, we are waiting on the power company to restore full power.

As a result of the power outage and potential for off-site odor, we are conducting supplementary odor patrols throughout the community. If you detect landfill odor, you can contact us on our hotline at **(281-668-9747)**, or online at blueridgelandfill.com/contact-us/odor-report, and we will investigate.

Thank you in advance for your patience and understanding.
