

Blue Ridge Landfill Welcomes More Than 150 Neighbors To Open House

October 30, 2019

FRESNO, Texas. Last Saturday, the Blue Ridge Landfill team welcomed more than 150 neighbors to an on-site open house. During the event, our team shared information about responsible landfill operations, highlighted some of the enhancements we have made over the past three years, offered tours of the facility, and had the opportunity to meet many of our neighbors in person. It was a beautiful afternoon full of fun, games, delicious barbecue, and fellowship.

Prior to the open house, we celebrated the grand opening of the new landfill gas-to-energy facility at Blue Ridge. Replacing an older facility at the site, the new facility is designed to collect landfill gas generated at Blue Ridge Landfill and yield clean, renewable fuel. The facility has the capacity to reduce annual greenhouse gas emissions equivalent to more than 51,000 cars on local roads, according to the U.S. Environmental Protection Agency. It's a project we and our community can be very proud of.

Thank you to all who joined in the grand opening and the open house. It was a wonderful day, and we greatly appreciate your participation. We remain honored to serve this special community and committed to being a good neighbor and responsible operator.
